USB

Minimum System Requirements (PC):
WindowsXP (SP2) / Windows Vista
Pentium III or AMD Athlon 1GHz
512MB RAM

PRODUCT DESCRIPTION

DJ-Tech's i-Mix is a DJ software controller for DJs who yearn for the control they left behind when they switched from a traditional mixer to the multi–processing power of laptop DJing.
i-Mix is a fully class–compliant USB MIDI device and is the ultimate tool for any performing computer DJ seeking total control of their software.

i.Mix's 48 buttons, 10 knobs and 5 faders send MIDI data from the controller to your DJ software of choice, making the inconvenience of mouse or glide–pad software control a thing of the past. No assignment of software parameters for the i.Mix is necessary – simply connect the controller to a computer with a USB cable, enable it in your DJ software's configuration screen, and watch the virtual controls respond to i-Mix's actions.

The i.Mix comes packaged with Mix Vibes's 3DEX LE software, with pre–mapped controls and overlay "skins" for both applications.
